FOR IMMEDIATE RELEASE

Jetro Platforms Announces COCKPIT™ Support for Windows 2008 and More, with its new version

Jetro releases a new, feature-enhanced version of its flagship Jetro COCKPIT Centralize Application Delivery and Virtualization solution

July 6, 2008, Tel-Aviv - Jetro Platforms, a leading vendor of server-based application delivery and virtualization software solutions today released the newest version of its flagship COCKPIT™ solution. The new COCKPIT version 3.8.2 brings forward an enhanced feature-set including support for the Microsoft Windows 2008 Server operating system, additional support for Smart-Card authentication and a host of updates designed to further boost the performance and capabilities of COCKPIT.

The new COCKPIT 3.8.2 is the first version to be released by Jetro following its successful acquisition by the RDT Group in February 2008. The version's new features include support for the Microsoft Windows 2008 Server operating system launched earlier this year and enhanced Smart Card support which enables the authentication of users with a wide variety of 3rd party 2-phase/certificate authentication devices and solutions.

"The new version enables Jetro Platforms to continue to strengthen its position as the preferred provider of Application Delivery to hundreds of customers around the world", said Giora Shaked, CEO of Jetro Platforms. "Our development team has nearly doubled since the acquisition by RDT - a fact that helped us realize the new enhancements effectively and in record time."

In addition to the new features, COCKPIT version 3.8.2 also addresses a significant number of other critical components, improving their performance and reliability. These include load balancing, fail-safe mechanisms and clustering support; tunneling mechanisms for video channels between servers and clients; printing mechanisms and more. The new version is available without extra charge to all Jetro Platforms clients that are included in the yearly maintenance contract service.
