Jetro Platforms Introduces COCKPIT™ On Key - a Revolutionary New COCKPIT Client Solution

New installation-free solution enables secure access to the enterprise environment from any PC, anywhere in the world

June, 16th, 2008, Tel-Aviv - Jetro Platforms, a leading vendor of server-based application delivery and virtualization software solutions today introduced its new "COCKPIT On Key" solution. Now available, the new solution features the standard COCKPIT client on a compact USB memory stick. COCKPIT On Key enables users to log onto their enterprise environment from any Windows-based PC connected to the internet. No installation is required and the secure solution leaves no files or records on the host PC, enabling a simple and secure working experience.

Jetro Platform's COCKPIT On Key is a true plug and play device. Once inserted into the host PC USB port, a standard COCKPIT Login page automatically appears on screen. After entering their user name and password, users will gain access to their enterprise working environment. COCKPIT On Key utilizes Jetro's COCKPIT Secure Connector (CSC) Technology that can encrypt all the communication between the client and the enterprise.

"The new COCKPIT On Key is simple to use and easy to carry around, and allows instant access to crucial data and applications from virtually anywhere in the world." said Giora Shaked, CEO of Jetro Platforms. "Creating USB Clients for existing COCKPIT domains does not currently require any additional licenses, as it uses the existing licenses. That way our customers can enjoy the benefits of COCKPIT On Key without any incremental operational costs."
