IDC Names Jetro a Company to Watch Citing its SaaS and Secure Web Browsing Solutions Offering

Tel Aviv, Israel, June, 2010 - RDT Jetro, a leading provider of server-based application virtualization software solutions is named A Company to Watch by IDC Research.

Analyst Dan Yachin cites Jetro's SaaS offering and its advanced Secure Web Browser solutions as the main reasons for putting a spotlight on the company. *"While many companies provide similar capabilities to those provided by Jetro, the company's strength is in combining these functionalities in a single, integrated offering,"* says Dan Yachin.

"The move into the SaaS management/enablement space can further differentiate Jetro from its traditional competition in the VUS market. In addition, Jetro's COCKPIT2i offers an alternative approach to Web security that is based on converting Web content to secure vide-like format instead of filtering for malicious or inappropriate content."

The IDC report mentions three Jetro solutions:

Jetro CloudMAX - which addresses the challenges of building, managing, deploying, and maintaining multitenant SaaS/cloud environments
Jetro COCKPIT - a software solution for managing server-based computing (SBC) environments.

Jetro COCKPIT4i – a 100% secure web browser which utilizes video virtualization to allow users to safely view their requested Web content

Giora Shaked, CEO of RDT Jetro, said: *"this is an important endorsement by one of the leading independent research firms in the world. Jetro has a set of vertical-specific and dedicated product versions for secure Web browsing and SaaS deployments, along with strong channels and partnerships required for pushing our virtualization into the market."*
